

# Würth Premium Abrasives

A one stop shop for your entire abrasive needs

-  Discs
-  9" X 11" Sheets
-  Sponges
-  Portable Belts
-  Wide Belts
-  Backing Pads

Available exclusively through

# Introduction

Valued Customer,

McFadden's is proud and excited to announce the introduction of the Wurth Abrasives Program. Wurth, with headquarters located in Zurich, Switzerland, is our parent company. The Wurth name is synonymous with the highest quality wood-working products available anywhere and at any price.

Wurth has taken its insistence on high performance and quality and designed a comprehensive abrasive program exclusively for the woodworker. The Wurth Abrasives Program combines the three qualities our customers value most: Performance, Value, and Selection.

1. Performance - Top performance starts with state of the art technology. Our factories employ only the top engineers in the abrasive field. Cutting-edge computer controlled machinery is used exclusively throughout the manufacturing process. As a result, all of the products in the Wurth Abrasives Program cut faster, last longer, and cost you less than compatible products!

2. Value - The combination of outstanding life and performance, low cost of usage, and a comprehensive selection allow you to spend less and get more!

3. Selection - McFadden's, through the Wurth Abrasives Program, has the selection to serve all of your abrasive needs as a "one-stop" resource. The program includes all of the discs, belts, and sponges you utilize daily. No matter what your sanding needs, we are confident we have the abrasive for you!

Wurth searched the world over to align itself with the right abrasive manufacturers who could supply finished products equal to your demanding standards. The results exceeded even our high expectations and we now offer a full line of the finest performing abrasive products available.

At McFadden's, we know that choosing the right abrasive is important to you. You take pride in your work and want it done well. Partner with McFadden's and Wurth Abrasives because we want it done right as well! Please take a moment to review this catalog and contact your McFadden's Sales Representative to use Wurth Abrasives on your next project.

# WURTH EMERALD

## FILM DISCS

Wurth Abrasives is proud to introduce the flagship of our line, Wurth Emerald. Wurth Emerald is the finest performing abrasive disc we have ever tested. This amazing product is the result of a brilliant upgrade in material using film rather than paper. Film is state of the art in disc material. It far outlasts paper and offers maximum moisture resistance, flexibility, and ruggedness. Once we chose film as the foundation for Wurth Emerald, we needed a high performing abrasive to match. Heat-Treated Aluminum Oxide was the perfect choice to ensure outstanding performance. Much like tempered steel, heat-treated Aluminum Oxide can be more costly but the tremendous increase in performance is worth it. Wurth Emerald is by far the best choice when only the best will do!

- ✚ Emerald Discs utilize 'Open-Grain' design to reduce heat & 'loading up'.
- ✚ 100% waterproof – perfect for Wet Sanding Applications.
- ✚ Film outlasts paper resulting in less disc usage for projects.
- ✚ Ideal for Solid Surface Applications.
- ✚ Exceptional product resulting in highest quality and performance.

### Wurth Advantage

#### PSA vs Hook and Loop

- ✓ Hook and Loop allows you to reuse discs
- ✓ Hook and Loop is more forgiving than PSA, and delivers a smoother finish
- ✓ Hook and Loop pads last longer than PSA pads, saving you more \$\$\$

For years, shop owners have resisted making the change from PSA discs to a Hook and Loop system. The number 1 reason...expense.

Be sure to ask your McFadden's Rep how you can take advantage of our Wurth brand hook and loop system. We can put \$\$\$ back in your pocket now!

 Emerald films are available from 36 to 2000 grit.  
The grits not shown on the table are available upon request.

Wurth Gold Discs and 9X11 Sheets offer you a high performance disc at an economical price. Some of our competitors cut cost by offering thin "A" weighted discs. Wurth Gold only uses the finest latex impregnated "C" paper. This ensures longer lasting service, superb moisture resistance and flexibility. In addition, Wurth Gold uses Heat-Treated Aluminum Oxide as opposed to the inferior standard Aluminum Oxide used by many others. Heat-Treated Aluminum Oxide cuts faster, lasts longer and reduces swirl marks.

- ✚ General duty sanding discs and sheets.
- ✚ Open-Coat Design reduces heat and resists 'loading up'.
- ✚ Latex Coated Paper Discs improve moisture resistance and flexibility.
- ✚ High Performance / Cost Savings.
- ✚ "C" weighted paper out performs competitors use of "A" and "B" paper.
- ✚ Perfect choice for Universal and Fine Sanding as well as Stock Removal.

# WURTH GOLD FLEXIBLE SANDING PADS

Wurth Gold Flexible Sponge Sanding Pads combine great performance, convenient packaging, and outstanding flexibility.

Do you need a sponge for your job? Look no further than our Wurth Gold Series. Simply tear off a sponge from the perforated holes along the 27-yard roll of Sanding Pads. The packaging of Wurth Gold Flexible Sponges eliminates unnecessary surplus of unused sponges collecting dust on your shelves. Our boxed sponges stay clean and ready to use when you need them. Wurth Gold Flexible Sponges are the perfect choice for your shop's finishing room needs.

- ✚ Open-Coat Design for long lasting 'no load' performance.
- ✚ Flexible sponge allows for easy sanding of irregular surfaces.
- ✚ Perforated sections make for easy tear-off.
- ✚ Ideal for scuff sanding in your finishing room.
- ✚ Wide Grit selection.

### Wurth Advantage

#### Got air?

- ✓ Do you have enough?
- ✓ Do you have 90PSI @ the tool?

Inadequate air volume or pressure will cause your tool to underperform and will certainly affect your surface finish.

No abrasive line is complete without a high quality Silicon Carbide offering. For our Wurth Silver Series Discs & Sheets, we use only the finest Silicon Carbide available. The Silver Series uses "A" weighted latex impregnated paper to ensure excellent flexibility and water resistance. For superior Sealer and Lacquer Sanding, look no further than Wurth Silver.

- ✚ Open-Coat Design for long lasting 'no load' performance.
- ✚ Premium Silicon Carbide Abrasive.
- ✚ Designed primarily for lacquer sanding and finely grained wood smoothing.
- ✚ The professionals' choice for finishing room general duty.
- ✚ Latex coated paper discs ensure excellent flexibility and water resistance.
- ✚ Perfect for removing 'orange peel' and scuff sanding.
- ✚ Stocked in 9x11 sheets.

### Wurth Advantage

Wurth Silver Paper  
Where does it fit?

✓ Sealer, scuff and finish sanding.

Silicon Carbide grain is very sharp and is the best abrasive for removing grain popping.

Always use a back up pad when hand sanding, this will help to reduce cross grain scratches that you may not see until your top coat is applied.

# WURTH RUBY PORTABLE BELTS

Wurth Ruby Portable Sanding Belts are the perfect combination of performance and value. Wurth only uses the finest Heat-Treated Aluminum Oxide for Ruby Belts. This results in a super tough, long lasting belt. Wurth's unique 'no load' design means faster stock removal with less clogging. The belt material excels as only premium "X" weighted cloth is used. The ultra low-profile lap joint ensures low 'chatter' noise from your belt sander. While lesser belts will often leave grooves on your work, the Wurth Ruby Portable Belts will not. For the best in performance and value, make sure you use our Ruby Portable Belts on your sanding machines.

-  Special "Open-Grain" belt design reduces loading grid heat.
-  "X" weighted cloth for superior durability and performance.
-  Cost Effective – High Performance.
-  Premium Heat Treated Aluminum Oxide Abrasive.
-  Stocked in a variety of sizes & grits.

### Wurth Advantage Tool Tips

Do dirty abrasive belts that no longer do the job frustrate you? Wurth's patented Abrasive Sanding Belt Cleaning Sticks are the perfect solution for your belt cleaning needs. Regular cleanings with these 100% smoked-rubber cleaning sticks ensure that your belt cuts faster and runs cooler. Start saving \$s by extending the life of your abrasive belt when you take advantage of Wurth's Sanding Belt Cleaning Sticks.

WH.089301  
Sanding Belt  
Cleaner

#### Abrasive Belt Cleaning Sticks - PRODUCT FEATURES:

**Easy to use.** Simply turn on your belt sander and press the new Abrasive Sanding Belt Cleaning Stick onto your dirty and clogged belt. Your new cleaning stick will quickly remove built-up layers of dust and pitch, thus resulting in better performance.

**Better Material.** Made of 100% smoked-rubber, these cleaning sticks are denser than those made of crepe-rubber.

**Longer Lasting.** Industry testing showed the smoked-rubber Wurth Cleaning Sticks lasted twice as long as other material.

**Excellent Performance.** Cleaning Sticks are excellent for removal of embedded residue from abrasive surfaces.

# WURTH SANDING SPONGES

## BLOCK & CONTOUR SPONGES

Wurth Sanding Sponges, handmade in England, represent the latest in innovative design. Premium quality, ease of use, and longevity are the hallmarks of these abrasive sponges. Wurth's Block and Contour Sponges are perfect for Scuff Sanding, Sealer Sanding, and Spindle Sanding as well as other applications requiring optimum quality, durability, and flexibility in an abrasive sponge.

You have tried all the others but now try the best! After using Wurth Block and Contour Abrasive Sponges, your employees will thank you!

- ✚ Ultimate in quality, durability, and performance.
- ✚ Manufactured in England with state of the art technology.
- ✚ Conveniently packaged.
- ✚ Flexible, Non-Loading Aluminum Oxide Abrasive Sponges.

# WURTH VELVET FOAM ABRASIVE SANDING DISCS

Wurth Velvet Abrasive Sanding Discs represent the abrasive technology of tomorrow-TODAY! Made in Switzerland in a state of the art laboratory, super refined abrasive granules are chemically bonded to a unique foam-based cellular structure resulting in an exceptional Foam Abrasive Disc. These sanding discs define high quality, flexibility and long lasting performance.

Wurth Velvet Foam Abrasive Sanding Discs are 100% waterproof, perfect for any wet sanding application. Wurth Velvet Discs are also washable making them reusable. Utilizing patented technology, Wurth Velvet delivers the finest scratch patterns allowing you to achieve the exact sheen you desire on your work.

If you demand the ultimate, demand Wurth Velvet!

- ✚ Outlasts any other foam abrasive sanding discs
- ✚ Low-scratch depth (excellent finish)
- ✚ Waterproof & washable
- ✚ Minimum clogging when Dry Sanding
- ✚ Consistent finish throughout life of disc
- ✚ Flexibility – used in both ‘hand’ and ‘machine’ applications
- ✚ Exceptional when sanding contoured surfaces, corners, and sharp edges.
- ✚ Ideal for Solid Surface and Lacquer Finishing. Reduces buffing and hand rubbing time.

### Wurth Advantage

Wurth Velvet

Having trouble getting consistent results with your current solid surface finishing products?

Does it take hours of trial and error to achieve the spectacular results you demand?

We have heard from many solid surface fabricators over the years that providing a consistent, low cost finish on solid surface projects is a challenge.

Current solid surface finishing abrasives lend themselves to inconsistent surface finish due to the nature of their design.

Wurth Velvet combined with Wurth Emerald will provide you with a much more consistent repeatable finish for all your solid surface projects.

Ask your rep to show you how!!!

# WURTH WIDE BELTS

You have invested in automated sanding machinery. You demand the best in abrasive wide belts to protect your investment. Try Wurth Abrasive Wide belts for your Drum Sanding and Wide Belt equipment. Manufactured in Switzerland, Wurth Wide belts feature state of the art technology, patented anti-static design, non-loading abrasive coating and low-profile joints. All of these features are available in four (4) distinct belt series.

**SERIES 2028.** "X" weighted heavy-duty poly cotton combined with Premium Aluminum Oxide Abrasive. Wurth Series 2028 is designed for heavy stock removal when sanding hard or soft woods. Standard sizes in stock, custom sizes available, Grits 80-120. Zero Tolerance Lap Joint.

**SERIES 2020.** "X" weighted heavy-duty cloth combined with Premium Aluminum Oxide Abrasive. Wurth Series 2020 is perfect when your application calls for a smoother finish and less aggressive stock removal. Standard sizes in stock, custom sizes available, Grits 150-220. Zero Tolerance Lap Joint.

**SERIES 1019.** "F" weighted latex impregnated paper combined with Premium Aluminum Oxide Abrasive. Paper belts offer the ultimate in a low scratch, flawless flat finish. Standard sizes in stock, custom sizes available, Grits 80-120. Zero Tolerance Low Profile Joint.

**SERIES 1028.** "F" weighted latex impregnated paper combine with Silicon carbide Abrasive. This series is perfect for Scuff and Sealer Sanding or simply in need an impeccable smooth finish on finely grained wood. Standard sizes in stock, custom sizes available, Grits 220-340. Zero Tolerance Low Profile Joint.

While all four Wurth Abrasive Wide belt Series are stocked in standard sizes, your custom order needs are welcome! Check out Wurth's "Fast Track" program. You will be pleased with the easy order process, quick turnaround (14 days or less), and door-to-door professional delivery. Please see your McFadden's Representative for details.

- Patented anti-static design ensures low dust adhesion on belt, machinery, and work area.
- Zero Tolerance Lap Joint means no bumping or marking.
- Unique flexible cloth or paper-backed belts stay sharper longer.
- Sturdy backing results in longer belt life.
- Exceptional "Fast Track" Program; any size belt delivered to door in two weeks.

\* S/C = Silicon Carbide, A/O = Aluminum Oxide

# Abrasive Definitions & Applications

-  **Silicon Carbide:** A very sharp, shaped mineral, which is harder and sharper than Aluminum Oxide, perfect choice for cutting hard materials, such as finishes, paint, plastic and metals.  
Silicon Carbide is the preferred choice in the "Finishing Room" for sanding pre-cat lacquers, sealers and conversion varnishes. Silicon carbide is also the "Pro's" choice for fine sanding applications.
-  **Aluminum Oxide:** A sharp and blocky mineral. It is tougher to break down than Silicon Carbide. This makes it ideal for stock removal and general shop duty. As sanding takes place, Aluminum Oxide renews its cutting edge, allowing it to remain sharp and cut longer.
-  **Aluminum Zirconia:** Also known as "ZIRC". It is extremely hard and tough. It requires heavy pressure to renew the sharp edges. Designed for heavy stock removal, it typically is applied to a heavier backing than the basic Aluminum Oxides such as "Y" or "Z" weight.
-  **Grit:** A function of the type and size of material used in an abrasive. Grit defines the coarseness of a given abrasive. The size of the mineral is measured by a series of screens according to the European FEPA standards.
-  **PSA:** (Pressure Sensitive Adhesive) One method of adhering the coated abrasives to the tool. Often referred to as "Peel & Stick".
-  **Velcro or Hook-It:** Another method of adhering the coated abrasive to the work tool. The back-up pads typically have the "Male" material attached to the face, and the abrasives have the "Female" material attached to it. (Making a secure connection.)
-  **Garnet:** The only natural abrasive mineral still widely used for woodworking. It is blocky, not very tough and dulls quickly. Garnet does however, produce a very good finish. Primarily used in hand sanding applications and in sheet form.
-  **Swirl Marks:** Surface marks left from the movements of "Orbital Sanders". Various factors such as the type and construction of sandpaper, back-up pads, speed of the sander, and the size of the orbital action (e.g. 3/32", 3/16", or 3/8") can cause swirl marks. The longer the orbital action, the greater the risk of swirl marks.
-  **Pig Tails:** Pulls in the surface finish - usually related to the type of abrasive used and the DA sander. Appears as a small pit with a trailing line protruding from it.

## **Belt Joints** (Types Used - Advantages/Disadvantages of each.)

Lap Joint: The four main classes of Belt Joints are:

### Type 1 - Simple Lap Joint without grit reduction.

This is used primarily with paper belts and provides an "O" Tolerance joint which produces a chatter free finish.

### Type 2 - Lap Joint - abrasive coating removed in an overlap area. Used primarily on flexible belts with profile sanding applications.

### Type 3 - Butt Joint - splicing tape on backside. Standard joint for "X" and "Y" weight cloth belts. Creates a slight over thickness which varies based on the grit of the belt and tape thickness.

### Type 4 - Butt Joint - splicing tape on abrasive side. For use in sanding MDF materials where finish has to be chatter free. Used only on cloth belts.

## Weight ("C" Weight - "Y" Weight, etc.)

Chart below is for paper belts. "A" weight paper is the lightest material and the "H" the heaviest. Discs may range from "F" weight all the way down to the "A" weight. Belts typically are either "F" or "E" weight - depending on the product.

| Paper (Code) | g/m2    | Application                        |
|--------------|---------|------------------------------------|
| A            | <85     | handsanding, finesanding           |
| B            | 86-110  | handsanding                        |
| C            | 111-135 | handsanding, portable sanding mach |
| D            | 136-220 | potable sanding machines           |
| E            | 221-270 | machine sanding (light wide belt)  |
| F            | 271-350 | machine sanding (wide belt)        |
| H            | 351-500 | machine sanding (segmented belt)   |
| G            | >500    | machine sanding (segmented belt)   |

Chart below is for Cloth Belts. The "H" is the most flexible and the "Z" the heaviest and stiffest backing. Profile sanding typically uses the "H", "JJ", and "J" backed materials. Wide cloth belts primarily use "X" weight and some "Y" weight materials.

| Coth(Code) | Characteristic                      | Application                          |
|------------|-------------------------------------|--------------------------------------|
| H          | very highly flexible or stretchable | profile sanding, finishing           |
| JJ         | highly flexible                     | contour, profile & fine sanding      |
| J          | flexible                            | contour sanding                      |
| X          | stiff, heavy                        | performance sanding                  |
| Y          | very stiff, extra heavy             | high performance sanding             |
| Z          | very heavy, reinforced              | for segmented belts (panel industry) |

# Abrasive Definitions & Applications

-  **Interface pad.** A soft, ½" thick disc pad that is applied to the DA back-up pad. The abrasive disc the attached to the interface pad. Typically this is mated to a "Hook & Loop" pad and disc, and is used to sand contoured shapes and edges.
-  **Bond** The substance used to adhere the grain to the backing on a coated abrasive product. The most common type of bonding agent is urea-based adhesive. Urea is inexpensive and brittle. Wurth Premium Abrasives only use acrylic-based adhesives, which are much more flexible and reliable.
-  **Disc** A round, coated abrasive product, which is affixed to a rotating plate or back up pad for portable or stationary grinding. Discs are available in 5" and 6" diameters, with or without vacuum holes and with PSA or Velcro backing.
-  **Finishing Room** Finishing abrasives are products manufactured on "A" weight backings normally in fine grits. They are used to hand-sand for final finish on wood, metal, ect. Try our Wurth Silver discs and sheets in your Finishing Room.
-  **Film Disc** A sanding disc utilizing film as a backing material. Ideal for the most demanding applications. A film disc will outlast a paper disc 9 to 1. Film is water proof and nor affected by humidity.
-  **Flex** A manual flexing process in which the bond that holds abrasive grain to the backing of a coated abrasive product, is "broken" in a controlled manner. Each Wurth Abrasive in this catalog goes through a stringent flexing process before being packaged. This added step ensures that the end product is highly flexible while maintaining superior strength.
-  **Hand Block Sanding** using a flat block or formed block when sanding with belts or sheets, usually to finish wood work pieces. Flat hand blocks are used to polish flat stock, while formed blocks are used to sand shaped moldings.
-  **Orange Peel** A pattern or condition on some metal and painted surfaces similar in appearance to the pattern on the skin of an orange. It must be removed by adequate sanding or polishing to produce a perfect finish. If you have "orange peel" issues in your finishes Wurth Abrasives can solve your problems.
-  **Oscillating Sander** A pad type sander with a coated abrasive sheet fastened to it. Oscillation uses short, high-speed oscillating strokes, producing fast stock removal. Try our Wurth Silver, Gold or Emerald discs if you use oscillating sanders.

# Abrasive Definitions & Applications

-  **Random Orbital Sander** Random orbital sanders utilize random action leaving very few sanding marks on the finish. Many shops that use air powered 5" or 6" disc sanders utilize this tool. Try our Wurth Silver, Gold or Emerald for your random orbital sander.
-  **Sealer Coat** a thin coat of finishing material designed to seal the pores and surfaces of wood. This provides resistance to moisture and promotes adhesion to the top coat of finish.
-  **Sealer Sanding** Removing the roughness to level the surface and promote adhesion of finish coats. Our Wurth Silver discs and sheets as well as Wurth Sponges are excellent choices for this application.
-  **Size Coat** Second adhesive coat applied to a coated abrasive product. The "size" coat unites with the first coat and insures anchoring of the grain and proper adhesive level to the finished product.
-  **Stroke Sander** A large production sander that uses a hand-operated platen on a standard sanding belt to apply pressure for large surfaces, such as table tops and doors. If you have a stroke sander in your shop, Wurth Abrasives has custom sized belts available in a variety of grits and backing materials. (cloth or paper)
-  **Wash Coat** A very light coat of finishing material used to add depth to the color of furniture after staining. The solution is sprayed on and requires light scuffing. Also referred to as "glazing".
-  **Waterproof Abrasive** A coated abrasive which is used in wet sanding applications. If your job calls for wet sanding, try our Wurth Emerald film discs.
-  **Wide Belts** Coated abrasive products made in belt form over 12" wide. Wurth Abrasives can create wide belts in any length or width for your machine. Wurth wide belts are available in paper or cloth in a variety of weights.

## Wurth Advantage Tool Tips

Always start your Random Orbital sander on the work surface.  
Be sure to remove the tool from the surface before stopping.  
Working this way will always provide a higher quality, more consistent finish.

# Solid Surface Finishing Steps

| Step | Matte Finish     | Semi - Gloss     | High - Gloss      |
|------|------------------|------------------|-------------------|
| 1    | Emerald P180     | Emerald P180     | Emerald P180      |
| 2    | Emerald P320     | Emerald P320     | Emerald P320      |
| 3    | Wurth Velvet 240 | Wurth Velvet 240 | Wurth Velvet 240  |
| 4    |                  | Wurth Velvet 500 | Wurth Velvet 500  |
| 5    |                  |                  | Wurth Velvet 2000 |
| 6    |                  |                  | Wurth Velvet 4000 |
|      | Gloss 15         | Gloss 40         | Gloss 75          |

Trying to get that special finish on your solid surface projects? Let Wurth Abrasives take the mystery out of this process. Follow our easy steps on the chart above. No more trial and error. Eliminate mistakes, save time and money...

achieve the results you desire every time.

## Wurth Advantage

### Air lines

What is your air hose ID?  
Major manufacturers recommend a minimum 5/16 ID.  
We would recommend 3/8."

### Length

With every 10 ft of hose air pressure decreases.  
Utilize the shortest length airline that enables you to get the job done.

### Connections

Are your fittings tight or defective?  
Loose or broken fittings can cost you time and money.  
Added compressor wear and tear Increased energy consumption.  
Under powered tools can lead to inconsistent surface finishes and added rework.
